

CREATING AN E-COMMERCE SOLUTION...

From Idea to Implementation

“

You put big effort in to understanding what we wanted to achieve with our service. As a result, several times, you came up with great ideas and suggestions on how to make the application work and look better.

- Magnus Carlsson, CEO, MC Consulting

THE STORY

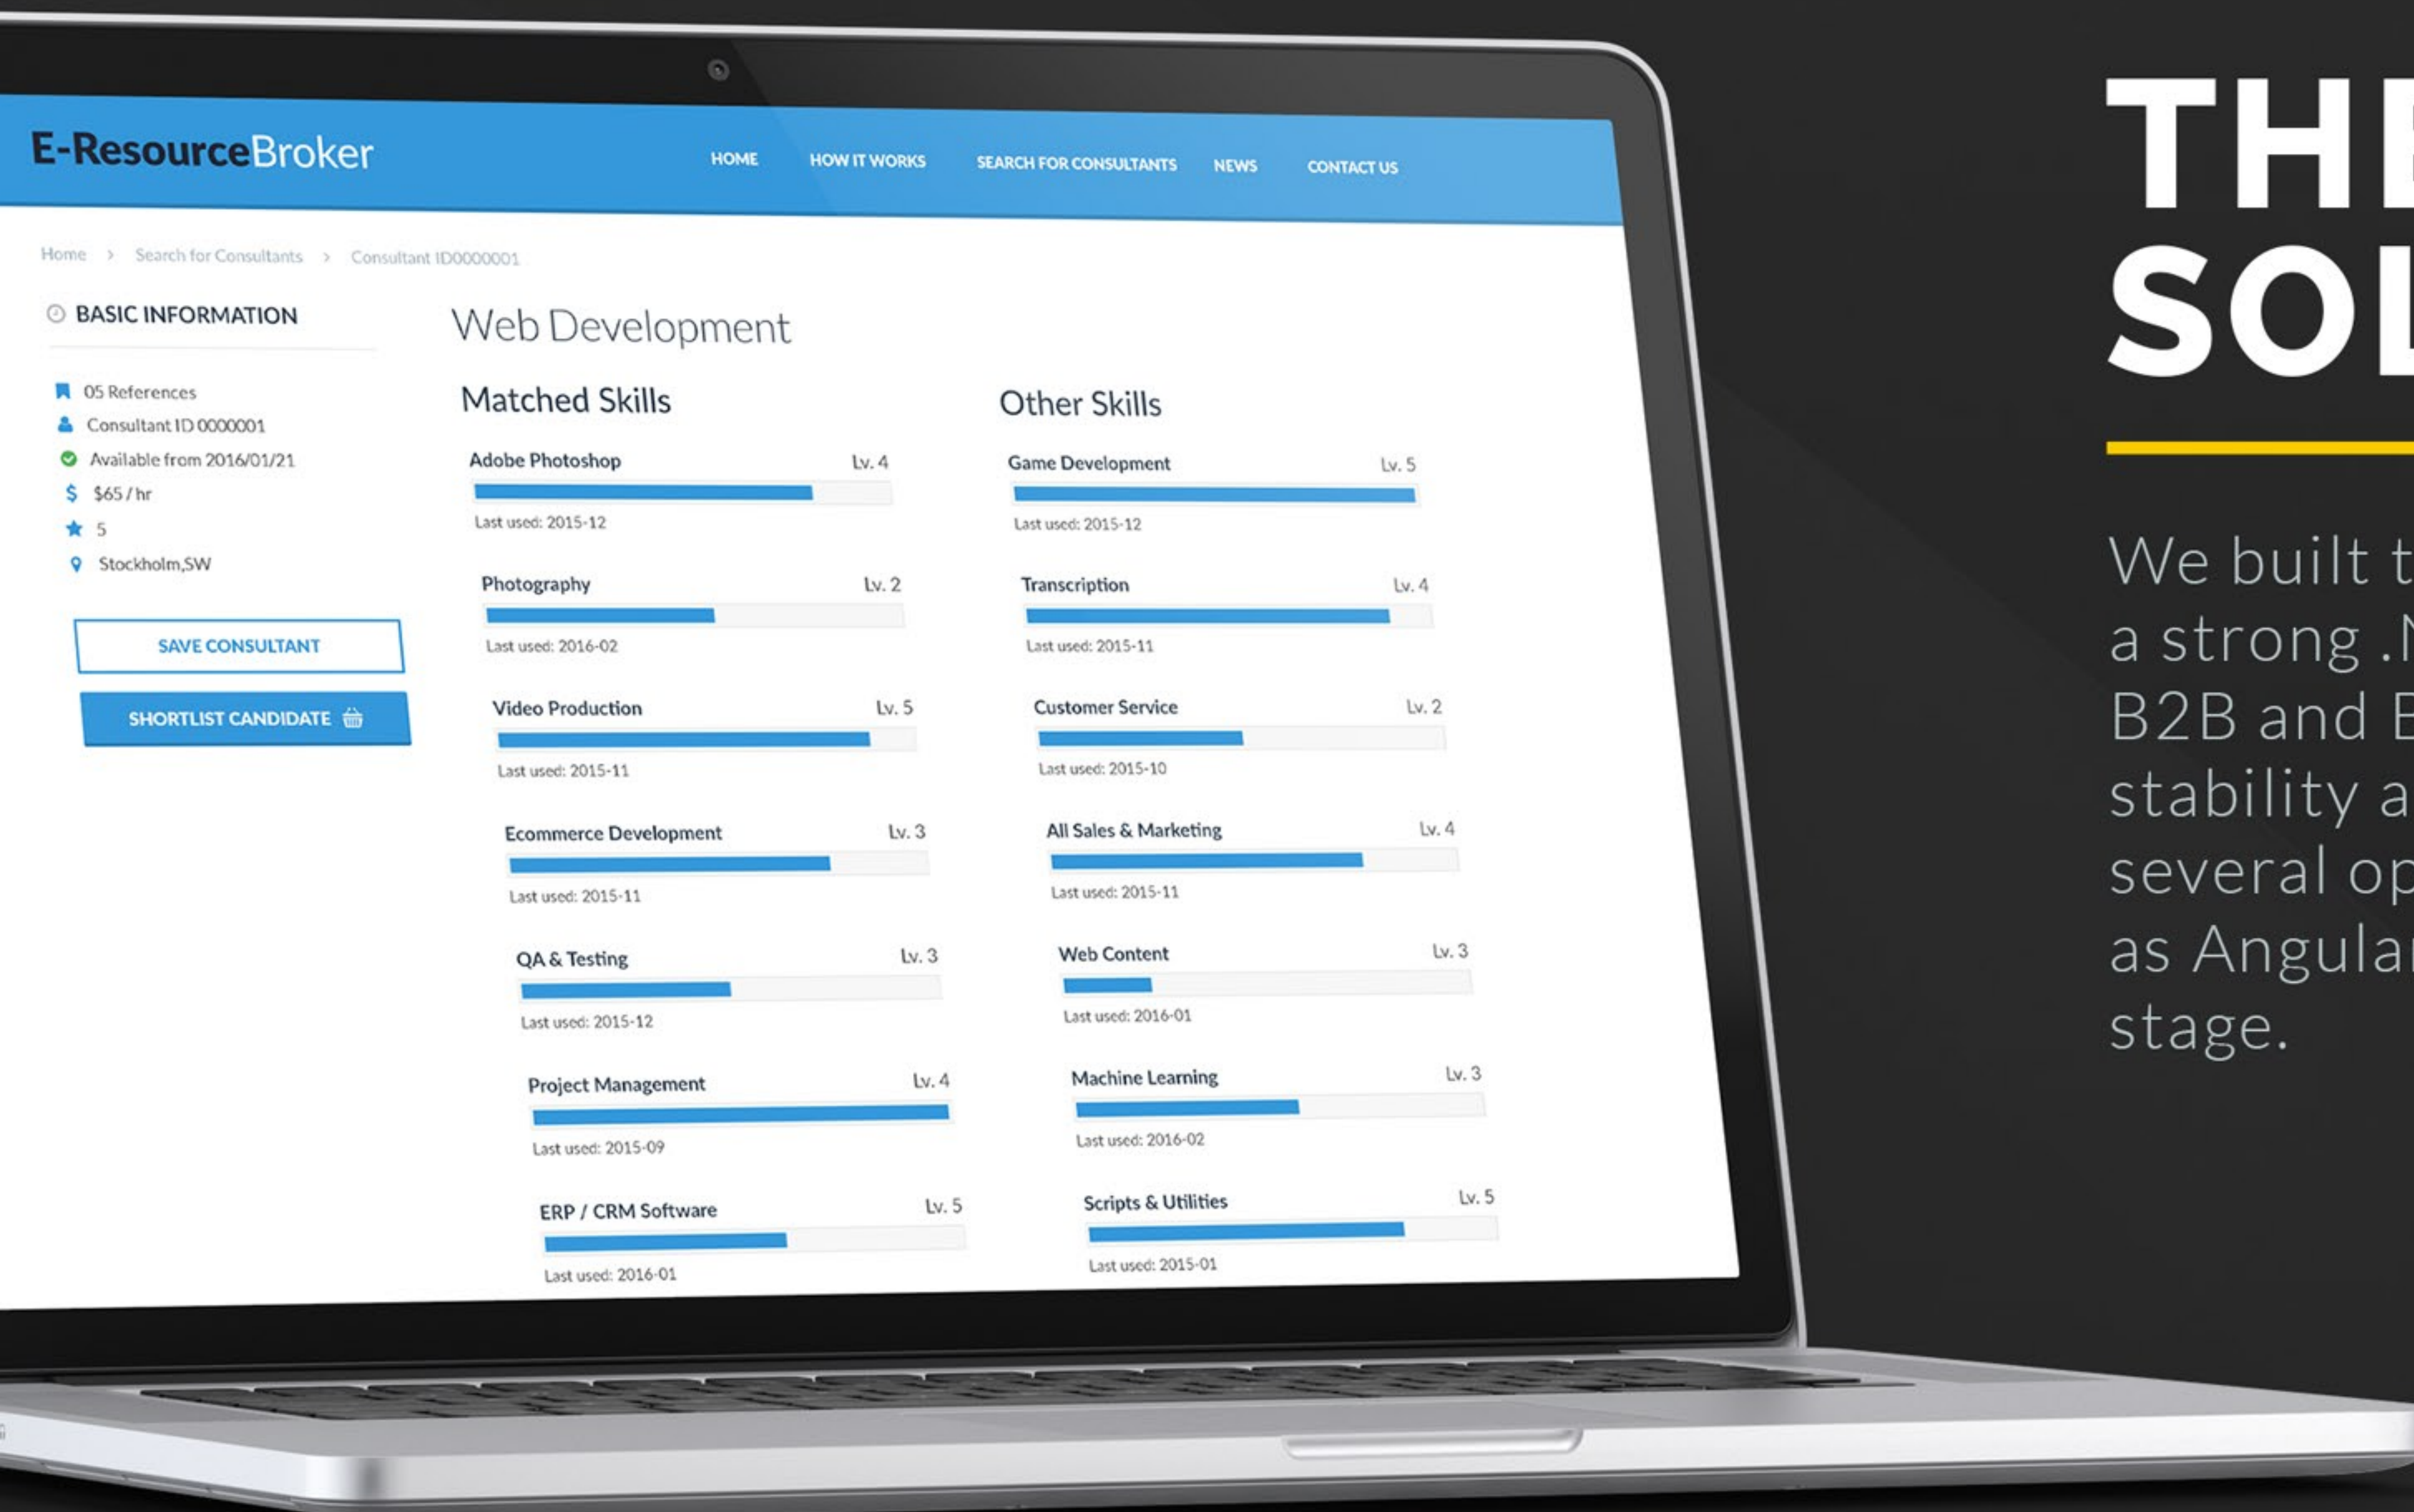

Niteco can help execute your vision

A Swedish startup, Cifereca had a grand ambition of a game-changing internet-based service to remove the middle man from the consulting brokerage business. Niteco, as Cifereca's technical advisor, created a trailblazing and comprehensive e-commerce solution to bring their innovative idea into reality.

THE CHALLENGE

Niteco's challenge was to create a simple system for clients to directly search for available and compatible resources, thereby facilitating the trading process between clients and consultants.

THE SOLUTION

We built the system on Virto Commerce, a strong .NET e-commerce platform for B2B and B2C solutions. In pursuit of stability and functionality, we used several open source technologies such as AngularJS, SignalR in the front-end stage.

THE TOOLS

.NET MVC

Microsoft OWIN

Entity Framework

AngularJS

SQL Server

Web API

ASP .NET Identity

Service Locator

SignalR

Visual Studio
